

ROAD & LANDSLIP REMEDIATION

REF No. E/EC- 868N

Client: Coffs Harbour City Council
Location: Coramba Road, Coffs Harbour
Project: Bella Spur Landslips

When Coffs Harbour Council was again faced with major flood damage including eight significant landslips on the Coramba Road they knew exactly where to go for help.

Having previously engaged the services of EarthTEC for landslide repairs at Bruxner Park Road some years earlier, the council knew that the response would be both rapid and effective.

Within a week, EarthTEC had a preliminary design and fully costed proposal for well over 700sqm of retaining walls and slip repairs. The well-prepared package made getting council approval much quicker and easier.

The proposed solutions comprised foundation works, including reinforced concrete, rock anchors, retaining walls incorporating both gravity and reinforced earth type walls, and extensive earthworks.

Some of the terrain was so steep that much of the work including the rock drilling and excavation had to be done by hand.

bolting, retaining walls and reinforced earth.

EarthTEC's quick response was so effective that the eight sites were completed before a contract package could be prepared for a similar landslide in a neighbouring area.

EarthTEC's quick response was so effective that the eight sites were completed before a design brief and tender package could be prepared for a similar landslide in a neighbouring area.

The completion of the works at Coramba Road brings the total number of landslips repaired by EarthTEC to well over 50,000sqm. and includes some of the most significant landslips in Australia.

Techniques employed range from rockfall netting and rockfall fences to shotcrete, soil nailing, rock
